

Solving Equations

1) $3n + 4 = 19$	2) $4n + 5 = 13$	3) $4n - 3 = 25$
4) $2n + 6 = 18$	5) $3n - 2 = 16$	6) $5n + 4 = 34$
7) $3n + 7 = 19$	8) $5n - 6 = 14$	9) $3n - 3 = 21$
10) $3n + 2 = 17$	11) $4n + 6 = 14$	12) $6n + 5 = 41$
13) $5n - 3 = 7$	14) $3n - 4 = 11$	15) $7n + 3 = 24$
16) $6n + 5 = 35$	17) $9n + 1 = 100$	18) $3n - 5 = 10$

Solving Multi-Step Equations

Solve each equation.

1) $4n - 2n = 4$

2) $-12 = 2 + 5v + 2v$

3) $3 = x + 3 - 5x$

4) $x + 3 - 3 = -6$

5) $-12 = 3 - 2k - 3k$

6) $-1 = -3r + 2r$

7) $6 = -3(x + 2)$

8) $-3(4r - 8) = -36$

9) $24 = 6(-x - 3)$

10) $75 = 3(-6n - 5)$

$$11) -3(1 + 6r) = 14 - r$$

$$12) 6(6v + 6) - 5 = 1 + 6v$$

$$13) -4k + 2(5k - 6) = -3k - 39$$

$$14) -16 + 5n = -7(-6 + 8n) + 3$$

$$15) 10p + 9 - 11 - p = -2(2p + 4) - 3(2p - 2)$$

$$16) -10n + 3(8 + 8n) = -6(n - 4)$$

$$17) 10(x + 3) - (-9x - 4) = x - 5 + 3$$

$$18) 12(2k + 11) = 12(2k + 12)$$

$$19) -12(x - 12) = -9(1 + 7x)$$

$$20) -11 + 10(p + 10) = 4 - 5(2p + 11)$$

Critical thinking question:

21) Explain two ways you could solve $20 = 5(-3 + x)$

Algebra Worksheet 1

1. Rewrite these expressions without the multiplication or division signs

a) $5 \times k$

f) $5 \times b \div 8$

b) $a \div 7$

g) $w \times 15$

c) $a \times b \times a$

h) $2a \div 5$

d) $3 \times x \times y$

i) $1 \times p$

e) $(a + 3) \div 2$

j) $9 \div t$

2. Rewrite the following expressions using multiplication and division signs where they belong

a) $7a$

b) $\frac{x}{9}$

c) $7x + 3y$

d) $8xyz$

e) y^2

3. Simplify the following

a) $3 \times 2m$

f) $4 \times 4a$

b) $8a \times 4$

g) $6 \times x \times x$

c) $7 \times 3x \times a$

h) $9q \times 8$

d) $2 \times 12c \times 10$

i) $7s \times 7s$

e) $7 \times d \times e$

j) $6 \times x \times y \times 2$

Sheet 7

When we put expressions into brackets it is called factorising, this is the same as undoing expanding:

Example:

$$\text{Factorise: } 6x-12 \begin{cases} \rightarrow 2(3x-6) \\ \rightarrow 3(2x-4) \\ \rightarrow 6(x-2) \end{cases}$$

These are all correct answers, but $6(x-2)$ is the best answer because the number outside the bracket is as big as possible

(2,3 & 6 are all factors of 6 and 12, but 6 is the h.c.f.)

Factorise:

a) $15h+30$ d) $6h+6$

b) $12m - 18$ e) $42k+14$

c) $21b + 7$ f) $30n - 20$

Sheet 8

When we put expressions into brackets it is called factorising, this is the same as undoing expanding:

Example:

$$\text{Factorise: } 6x-12 \begin{cases} \rightarrow 2(3x-6) \\ \rightarrow 3(2x-4) \\ \rightarrow 6(x-2) \end{cases}$$

These are all correct answers, but $6(x-2)$ is the best answer because the number outside the bracket is as big as possible

(2,3 & 6 are all factors of 6 and 12, but 6 is the h.c.f.)

Factorise:

a) $30j + 40$ d) $15h - 10$

b) $12p + 16$ e) $35 + 21g$

c) $20 + 16w$ f) $-6m - 3$
